DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The analogs of formula 1 recited in claims 1-16, and other combinations of substitutions, arising from the replacement of "A", "B", "C", "D", "E", "F", and "X", alongside other agents, not specifically recited in the claims.

The inflammatory bowel diseases in claims 17-22.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The MPEP states if an independent claim does not avoid the prior art, then the question whether there is still an inventive link between all the claims dependent on that claim needs to be carefully considered. Here the independent claim, 1 is not free of the prior art. Together, Fairlie et al (WO 1999/000406), and Nicholas et al (WO 1998/45309) render obvious the claimed invention. While Fairlie et al provide cyclic peptide antagonists to modulate the activity of G protein-coupled receptors for

inflammatory conditions, Nicholas et al provide the use of G-protein-coupled receptor antagonists to treat inflammatory bowel disease.

Further, the population of patients with varying types of inflammatory bowel disease is distinct because the treatment of one population does not lead to a treatment of another. Additionally, the end-points of the treatment of each disease is different.

Applicant is required, in reply to this action, to elect a single species i.e., the compounds encompassed by formula 1 must be defined specifically to which the claims shall be restricted if no generic claim is finally held to be allowable. In essence, all of the variables should be defined by the elected species. Further, if applicants elect a bowel inflammatory disease, then applicants are requested to elect a single disclosed disease. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
